2. Please explain the key elements of your study design and the use of the available datasets that make your study an original scientific contribution

While previous GBD-based studies have described the EC burden, our study offers a novel contribution by integrating (1) the latest data spanning the full COVID-19 period, (2) forward projections to 2040 using BAPC modeling, (3) a comprehensive multi-level analysis across geographic, demographic, and socioeconomic strata, and (4) updated risk factor attribution. These elements collectively provide a contemporary, evidence-driven foundation for global EC prevention and control strategies.

4. Please explain how you addressed multiple testing through an appropriately rigorous statistical threshold and indicate this in the methods section

Our study was primarily descriptive and hypothesis-generating, not confirmatory. Therefore, we did not apply formal multiple testing corrections across the many comparisons. Instead,

we focused on the magnitude and consistency of estimates rather than relying on p values. For the single correlation analysis between ASDR and SDI, no adjustment was needed as only one test was performed.

5. Please declare to what extent have AI chatbots been used in developing your paper and to which parts of the paper did they contribute

We declare that no AI chatbots or large language models were used at any stage of developing this paper, including study design, data extraction, statistical analysis, interpretation of results, drafting of the manuscript, or revision of the content. All aspects of this work were performed entirely by the human authors.

2	List the funding sources for the work.	P15
Data Inputs		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	P3
4	Specify the inclusion and exclusion criteria. Identify all ad_hoc exclusions.	
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	P3-4
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	P4
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	NA
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta_data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third_party ownership, provide a contact name or the name of the institution that retains the right to the data.	P16
Data analysis		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	P4
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre_processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	P4
11	Describe how candidate models were evaluated and how the final model(s) were selected.	NA
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	NA
